FIRST COAST FLY FISHERS

FEBRUARY 2018

Educating, Restoring, Conserving through Fly Fishing

FEBRUARY HIGHLIGHTS

The new year is in full swing. And the FCFF Board has put together a great list of programs and outings for 2018. There is sure to be a program or outing to pique your fly fishing interests. One important item of note for the new year is that the Club has changed its meeting location. For more than fifteen years the Club has met at Southpoint Marriott. During that time it has been a great monthly meeting venue for the Club; complete with a casting pond. However, the room fees accounted for more than half of the Club's annual operating costs. Last year the Club began reviewing alternate meeting locations, which would be more economical, and decided on **Black Creek Outfitters**. A long-time supporter of the Club, Black Creek is allowing the Club to use its meeting room for free. Black Creek Outfitters is located four miles away from the Marriott, so the new venue is still centrally located for our members. In addition, **Bono's BBQ** restaurant located next door to Black Creek is offering a discount to Club members on meeting nights. The Club is looking to use the money we are saving to offer more casting clinics and programs to members with some of the big names in the fly fishing industry.

Hopefully you were able to attend the *First Coast Fly Fishers Rendezvous at Deep Creek featuring Jon Cave* earlier this month. Early reports suggest that members were very pleased with the program and the venue. As always, Jon Cave did a fantastic job explaining how to improve casting techniques, which is vital if you want to up your fly-fishing game. Corri Davis and the rest of the Board did a fantastic job with the program. We will have highlights from the program in the March edition of the newsletter.

Shad are making their way up the St Johns River. Water levels are excellent and the fish count is up. Unfortunately, the conditions at Yellow Bluff are not favorable for the traditional camp out with the other central Florida Clubs. But not to fear, the February outing will give you a chance to target some shad. According to the Florida Fish and Wildlife Commission, this year's shad population is up, but they are not as abundant as the historical highs of 2010 through 2012. If you've never fished for shad, this will be an excellent opportunity.

HAVE YOU CHECKED YOUR TRAILER LATELY?

BY SCOTT SHOBER

While preparing for a fishing trip a while ago, I recall glancing at the leaf springs on my trailer and thinking to myself "those look a little rusted, I need to check them closer sometime". Well that turned out to be a huge mistake. On the return from our fishing trip, I ended with a steel leaf spring through the bottom of my aluminum jon boat. We almost lost the entire trailer axle. Fortunately no one was behind us, and we were able to pull off to the side of the road. My creative son ratchet strapped the axle back to the trailer and we were able to limp home on the back roads. It could have been much worse! Trailer inspection and maintenance should be performed on a regular basis. It is definitely not something that should be postponed.

Here is a quick checklist to go through before every trip:

- Make sure safety chains are crossed underneath the trailer tongue when connecting to vehicle, and insure the trailer is snugly on the hitch ball and latched.
- Make sure the tongue wheel is all the way up and clear, insuring it will not come unfastened when traveling.
- Inspect the winch strap for dry rot and have a safety chain connected to the boat's bow eye.
- Inspect the lug nuts and insure they are all tight
- Give your wheel bearings a shot of grease before every trip. Be sure to use marine-grade grease
- Inspect the tie down straps and transom straps to make sure they are secure
- Check trailer tire pressure – usually 50 PSI is recommended, and inspect trailer tires for wear and dry rot.
- Check the trailer lights – both brake and turn signals and make sure they ae operational.
- Check your hubs for excessive heat when you arrive at the ramp

These simple checks can help prevent a breakdown that can ruin a good fishing trip, as well as preventing a potentially dangerous situation from occurring.

A regular maintenance program is important in preventing breakdowns. In our corrosive salt water environment, you should rinse your trailer with fresh water af-

ter every use – rinse every part of the trailer, especially the suspension and behind the wheels. All trailers, whether aluminum or galvanized, have non-galvanized parts such as u-bolts, nuts, winch gear, and leaf springs. Coating these with rust inhibitor will also help prolong your trailer's life. Inspect your trailer for stress cracks regularly, and make sure you are not exceeding the weight rating. Loading the boat with excessive gear can add a lot of weight.

Install bearing protectors (Bearing Buddies) that allow new grease to be added with a grease gun, and cover the small grease nipple with a hub cover. Remember that our boat trailers tend to sit for extended periods of time, allowing parts to freeze up and tires to dry rot. If possible, move your trailer occasionally to get the tires sitting on a different section. While you are at it, spray the tires with a UV protectant such as ArmorAll to help prevent cracking and dry rot.

An emergency equipment kit for your trailer with spare tire, lug wrench, bearing grease, and safety flares, etc is a good idea. Carrying an extra hub and bearings assembly on long trips can save a huge towing bill if you have problems.

Most of us probably do not pay enough attention to the condition of our trailers. Following these few simple maintenance and inspection steps can help reduce the possibility that we end up broken down on the side of the road with trailer problems.

CCA License Plate Gaines Momentum

We're extremely excited that the CCA Florida license plate bill is continuing to gain momentum!

The license plate bill (SB 1248) sponsored by State Senator George Gainer, Representing Northwest Florida, was unanimously passed today by the Transportation Subcommittee in the Senate, and moves on to the next step in this process. The House bill (HB983) sponsored by Representative Chris Latvala was also voted unanimously out of its second committee in the House in January.

Funds received from this specialty plate will support habitat restoration projects throughout the state, and anglers and outdoor enthusiasts alike will see the positive impact of shoreline projects, reef developments and more. Thanks to Senator Gainer and Representative Latvala for their sponsorship of this legislation! We also want to thank Captain Mike Goodwine and Jesse Starr for the development of the license plate design. While not completely approved by the Department of Highway and Motor Vehicles, the plate will resemble this design. We encourage you to let your representatives in Tallahassee know you support this legislation and our mission of preserving and improving coastal habitat.

INO Weather Pro

Handheld Weather Station With Built-In Lightning Detector

Seven weather measurements in the palm of your hand: lightning detection up to 40 miles, temperature, pressure, humidity, heat index, dew point, and altitude.

The INO Weather Pro is the only product on the market today with all these features is one device. With our color touchscreen display, you can easily navigate and find the information you need when you want it. And with our dashboard feature, you can customize the Weather Pro to give you the parameters you want in one screen

Self-contained so there are no internet or cellular connections needed to measure the important weather conditions right where you are. The rechargeable battery lasts up to 30 hours on a single charge. Charge the unit via the included USB cable with a battery pack, wall charger, or computer.

With the USB cable, the Weather Pro is updatable. Buy with confidence knowing that your unit will always have the latest software to give you the best performance. And you can download all the data stored on the device to your computer in a CSV file. Going for a big hike, chart all the altitude and temperature changes you experienced. Concerned about your outdoor workers' exposure to the elements, track what they experience and know with confidence the conditions they worked in.

Manufactures retail price is $435. For more information check out INO Technologies web site: www.inotechnologies.com. You can find a recent review of the product at Angling Trade's website: https://www.anglingtrade.com/2016/12/06/a-product-your-guide-staff-should-have-the-ino-weather-pro/

Shadurday with Lee

A Rare Day on the Upper St. Johns

By Chan Ritchie

The narrows of the upper St Johns were boiling with shad. High water was rolling with the dark, irresistible force that lights-up these oceanic home-comers. At first glance, it appeared that good fortune had so positioned itself for that rarest of days when the sheer number of fish caught robs the angler of his prideful notion that his skill was involved. But appearance is such a cruel mistress.

Good shad reports from Rob and Dick primed me with a confidence that Lee Hinrichs' long-awaited return to the water would be a rewarding endeavor. To a roaring 60-knot wind, Lee's River Hawk slid into the current at C. S. Lee ramp. Surveying the grey and black clouds racing past overhead, I questioned the sanity of waterborne wanderers. I looked into Lee's eyes for unspoken signs of retreat and found nothing but a cold-steel resolve to press on.

As the raucous swamp-men, their dogs, and their hearty swamp-women vacated the launch area, the roaring gale-force winds from their cussed air-boats went with them. At 11:30 we sputtered south. By 11:38 we had two shad in the boat.

A fish caught on the first cast often foretells bad luck so I was relieved that my first two cast were ignored. Our first fish came on the third cast of my floating 5 weight tipped with Mike's white/gray/silver Clouser. After the release, I handed the rod to Lee while I rigged my sinking 6 weight with the Bartman inspired orange glue -fly. The orange fly was taken on my second cast and the bite was done. Lock-jaw had taken over the entire area.

Colorblind shad were all around us. They were tail-slapping, rolling and jumping, but they were not buying what Lee and I were selling. For three hours I experimented. I tied tandem rigs of differing colors. Fast sinkers, slow sinkers, no sinkers. I even attached a foam strike indicator and let the fly drift with the strong current.

Nothing.

Then, at 2:40 a dim light shined into one of the darkened corridors of my recollection. I recalled having tied tiny glass minnow patterns some years back.

Five or six shad-years ago Mike Head and I had forlornly witnessed a feeding frenzy of shad whose single-minded desire was a translucent and minuscule fin-fish. Momentarily hopeful, I began to stir the contents of my tackle bag. EURIKA!

With 15 inches of 10 lb. fluorocarbon I hung the little minnow behind the orange shad fly and got bit almost immediately. I tied a glass minnow behind Lee's white shad fly and he too got bit. The strikes and hook-ups kept coming, all on the glass minnows, as Lee quickly closed the gap.

I snipped-off the biteless orange fly, tied on a slightly larger glass minnow and hung the tiny minnow behind it. I promptly caught three shad on the larger glass minnow and jumped-off two more. Between the two of us, we brought 13 or 14 Shad to the boat, putting our

Shad Flies, including the Orange Glue Fly

hands on 9. We had momentary duels with half a dozen more. Somedays, I suppose, even the lowly shad is particular.

Epilogue

Midway through this writing, I consulted with one of the most experienced and successful fly fishers in our part of the world. With shad experience 10 times my own he related to me that he has experienced a pattern where shad shutdown around noon and turn back on around 3. He shared other observations that were present this day. Lee and I had experienced a dead-zone from 11:38 until 2:42, the latter of which I had offered-up the tiny glass minnow. And while all that I have written is true, well mostly true and self-inflating, it very well may be that our afternoon success was little more than timing. Fortunately for me, Rob is too gentlemanly to suggest such a thing, but if I were you I would avoid noon to 3 just in case my miraculous minnow was merely a cast of fortunate timing.

Free Women's and Adult Saltwater Fishing Clinics Coming Up in Jacksonville

The Florida Fish and Wildlife Conservation Commission (FWC) is hosting a Women's Saltwater Fishing Clinic on Feb. 17 and an Adult Saltwater Fishing Clinic on Feb. 18 in Jacksonville.

The free, day-long clinics are from 9 a.m. until 5 p.m. at Jacksonville University, 2800 University Blvd. N.

Advance registration is required.To register, visit MyFWC.com/Calendar and click on the drop-down menu "All Categories" to select the clinic. If you are having issues registering or have other questions, email Heather Sneed at Heather.Sneed@MyFWC.com, or call 850-487-0554.

The Adult Saltwater Fishing Clinic is for women and men 18 years of age or older. Prior saltwater fishing experience is not needed.

Participants will take home a lifelong hobby and leave with a new appreciation for the marine environment. They will learn the basics of conservation stewardship, fishing ethics, angling skills, safety and the vulnerability of Florida's marine ecosystems, all in a fun, laid-back atmosphere.

Lessons include knot tying, rod and reel rigging, how to be a responsible marine resource steward, marine fish and habitat identification, catch-and-release techniques and more.

If conditions allow, participants will have the opportunity to practice their newly learned skills by fishing from shore or a pier. This event is a catch-and-release activity. All participants must have a valid recreational saltwater fishing license unless exempt. Saltwater fishing licenses can be purchased at your local tackle shop or online. Learn more by visiting MyFWC.com/License.

Fishing equipment and bait are provided during the clinic, but participants are encouraged to bring their own gear.

FCFF Welcomes its 2018 Board of Directors

This month the new Board of Directors officially takes over the reins of the Club. However, they have been hard at work since being elected in October planning and organizing for 2018. Several of last year's Board Members have stayed on or accepted new positions, while other members transitions back to "civilian" life.

Those members stepping down from the Board include Mike Harrigan, Scott Hensley, and David Kudley. We thank them for their time and service to the Board during 2017. Their hard work and dedication contributed to the success of the Club. Be sure to thank Mike, Scott and Dave the next time you see them (you'll have to go to Hawaii to see Scott). The new Board members include: Eric Kazmerchak, John Halvorsen and Ed Glowacki.

The 2018 FCFF Board of Directors, which were introduced at the FCFF Rendezvous earlier in the month, include:

President - Scott Shober
Vice President of Programs - Matt Omlor
Vice President of Outings - Eric Kazmerchak
Treasurer - Bob Connery
Secretary - Paul Hutchins
Membership Chairman - John Halvorsen
Education - Gavin Glover
Banquet - Corri Davis
At-Large - Jerry Bott
At-Large - Ed Glowacki

In addition to the daily operations of the Club, the Board is looking into several new initiates and programs. Stay tuned!

Last Chance to Enter the Winter Photo Contest!

It's the final week to enter the Florida State Parks Winter photo contest. The site will continue accepting submissions until **Wednesday, February 21 at 11:59 p.m. (ET)**. For complete details of categories, prizes and rules to submit photos, please visit www.FLStateParksPhotos.com for your chance to win the following great prizes.

Good luck!

GRAND PRIZE: Cannon EOS Rebel T6 + Florida State Parks Family Annual Entrance Pass

SECOND PRIZE: REI Co-op Siesta 30 Sleeping Bag + Coleman Pack-Away Cot with side table + 12 Florida State Parks Day Passes

THIRD PRIZE: Coleman Classic Propane Stove + Snow Peak Personal Cooker 3 Cookset + 6 Florida State Parks Day Passes

Show us how you celebrate Florida State Parks! Whether you prefer to take in the sun and sand with family and friends, or explore nature on your own, capture and share your favorite winter moments in these categories:

Celebrate Winter – Winter in Florida is very different than most places in the country, with sand instead of snow and shorts instead of sweaters. Show us how you celebrate winter – Florida-style!

Celebrate Traditions – Share how you, your family and friends celebrate time-honored experiences and create new traditions in Florida State Parks.

Celebrate Special Events – Florida State Parks host special events throughout the year. From the Festival of Lights to the Florida Folk Festival, share your experiences celebrating with us.

Celebrate Nature – Winter is the perfect time to get out into nature in Florida. Capture your experiences while exploring the great outdoors in Florida State Parks!

Celebrate History and Culture – Experience the culture and history of Florida! Winter is a great time to visit a historic site, tour an old Florida homestead or to experience a living history reenactment. Share your photos as you uncover the unique history and culture at Florida State Parks.

Crevalle Jack or Jack Crevalle?

Jack Crevalle is that creepy guy that lived next door to your grandma who wore black socks with Bermuda shorts, chain-smoked Salems and had the hots for your aunt Linda. This twenty-eight pound hoss is a Crevalle Jack caught by Kevin Becker back in November during his annual trip to Louisiana. According to Kevin he put up quite a fight. He took over 200 yards of backing and took 38 minutes to get to the boat. Imagine what it must have been like to land the all-tackle record winner which clocked in at 66 pounds, 2 ounces!

Crevalle Jack (*Caranx hippos)* can be found from Nova Scotia to Uruguay and throughout the Gulf, inhabiting inshore and offshore waters.

Reilly Rod Crafters Announces New Joe Mahler Signature Series Fly Rods

Palmyra, VA (February 8, 2018) – Reilly Rod Crafters is proud to announce the addition of the Joe Mahler Signature series fly rods to its line-up of quality fly rods. The Joe Mahler Signature Series rods feature a unique grip design with logo etched in flor-grade cork handle and have a complete lifetime warranty.

"We are very excited to launch the Mahler Signature Series," said RRC President and CEO Chris Reilly. Reilly describes the Mahler series as, "everyday rods… comfortable, like your favorite pair of jeans. It's the rod you'll grab when you want to spend a relaxing day on the water."

Reilly Rod Crafters other signature series rods include designs with fly fishing legends Stu Apte and Chuck Kraft. Reilly continued, "You likely know Joe from his numerous casting articles and illustrations. His easy-going approach and effortless casting style fit perfectly with the Reilly philosophy."

On working with Reilly Rod Crafters, Mahler commented, "In ten years of giving private casting lessons, I have noticed that both beginners and experienced casters advance quicker and with less effort with a medium-fast action rod. I described what I wanted to Chris and he was able to deliver precisely what I was hoping for."

The rods are available in two models, the Lily Pad 5/6 and the Cypress 7/8, using colors pulled directly from nature. The Lily Pad is a shade of bright green, and the Cypress is medium orange. Both models feature salt-ready hardware, including three titanium stripping guides. They also come with a color-matched cloth sock and plastic tube for easy transport. Both rods retail for $289.

"On favorite rods that I've had over the years, I customized my cork grips to feature a 'dip' for finger or thumb placement. This 'dip' adds both comfort and stability to the grip, so I knew that if I ever designed a rod, the 'dip' would be a must," said Mahler. "When I first casted a Reilly rod at the Virginia Wine and Fly Fishing Festival, I knew that I wanted to work with these folks," he added.

For more information or to order the rods online visit https://reillyrods.com/product/joe-mahler-signature-series, or check the list of Reilly Rod dealers.

For further information, contact Chris Reilly at Chris@ReillyRods.com

How To Avoid Twist In Your Fly Line

RIO Products

The fourth episode of season two of RIO's "How To" series features RIO sales manager Zack Dalton explaining and demonstrating the difference between fly line twist, and line memory. In this film Zack describes how to avoid getting twist in a fly line in the first place, but also illustrates what to do to get rid of twist in a line if it happens. In addition, Zack talks about line memory and shows how easy it is to remove this from a RIO fly line. Zack's tips are very neat indeed and well worth learning, and any angler that has ever had their fly line jam in the rod guides because of coils or twist, will find this film hugely beneficial.

RIO's "How To" videos are a series of short films that explain all you need to know to learn a particular way to fish, or cast. Where applicable, each film talks through the gear that you need, shows how to rig the gear, how to read the water, and how to fish that particular technique. These educational films are packed with information and top tips designed to improve the knowledge and skill level of all fly fishers. Each one is bought to you by a RIO employee or a RIO brand ambassador.

If you are reading this from a web-enabled device, click on the image below to watch Rio's How To Video. Otherwise, type the following web address in our internet browser the next time you are in front of your computer: https://www.rioproducts.com/learn/how-to-avoid-twist-in-your-line

Club Members grabbing dinner after the January Outing at Fort Clinch

February Outing....

Shad Alley

February 17, 2018

This month the Club will be heading to the head waters of the St Johns River to fish for shad. Every year shad migrate from the Bay of Fundy to the St Johns River. Between January and February each year the shad begin pushing up the river. As the shad move further and further upstream the river starts to narrow and the fish become more concentrated in an area affectionately known as Shad Alley. It is here where you will have your best opportunity to catch fish.

By all accounts thus far, this year will be favorable for the shad catch. The annual shad outing is a popular trip for the Club each year. It is another unique fishing opportunity in Florida that only comes around once a year.

On Saturday February 17th will meet at the TA Truck Stop at I-95 and County Road 210 to caravan to the CS Lee Boat Ramp, smack in the heart of shad alley. The caravan will be pulling out at 8 AM, so plan to rally by 7:30 at the latest. From the Truck Stop it is a 2-hour ride to CS Lee. Follow I-95 south to Exit 223. Head east on State Route 46 approximately 11 miles to the boat ramp, which will be along the north side of the road immediately after crossing the St Johns River.

The Club will plan to do a shore lunch around 1 PM.

Boats

This outing is ideal for wade fishing as well as kayaks, canoes and power boats. There is plenty of shoreline for fishing. However, to get to these areas you will have to catch a ride in a boat. If you plan to wade fish, keep and eye our for alligators and water moccasins.

Flies and Equipment

Light tackle for this outing is preferable. A 5-weight rod with either a floating line or an intermediate sink tip will be ideal. Shad Darts and Glass Minnow patterns in size six or smaller in a variety of colors are preferable. Shad can be very finicky, so have a good selection of flies and be prepared to change flies regularly until you find a pattern that produces fish. Don't be surprised if the bite seems to die off after an hour or so or even after a few successful casts. Shad will change their minds quicker than a teenage girl. So, change flies often and don't be afraid to throw the kitchen sink at them.

How To

Most of the fish will be found near the bottom of the water column. So be prepared to work your flies along the bottom of the river. Cast up stream and allow the fly to sink and drift along the bottom. You won't need to strip the fly constantly, however, a gentle strip once and a while produces results. A lot of fish are caught on the swing as the fly reaches the end of the downstream drift and begins to rise to the surface.

"The charm of fishing is that it is the pursuit of something that is elusive but attainable, a perpetual series of occasions of hope."

John Buchan
Novelist, Historian and
Governor General of Canada

What are You Waiting For?

It is 2018. You should have started or renewed your membership to the First Coast Fly Fishers by now. The Board has a lot of great things in store for the Club this year and you don't want to miss out. Make a commitment to become a better fly fisherman this year and take advantage of all the Club has to offer.

From free casting and fly tying lessons; clinics with Bob Clouser and Mack Brown; educational meetings each month and the always informative and entertaining newsletter, everything you need to improve your game is readily at your disposal. Not sure where to fish? Join us for one of our monthly outings and get to know the local waters. You can have all this, for the entire year, for the price of a new fly line.

What are you waiting for? Sign up or renew today!

An Encouraging Report from Reid Hyle, Biologist with the Florida Fish and Wildlife Conservation Regarding this Year's Shad Outing…

The present water level is excellent for fishing between Harney and State Road 528. It is deep enough to get a small boat most anywhere with the usual caution and there is plenty of current to read and help find the fish. But the banks are good and exposed so you can beach the boat and stretch your legs. Plus the fish aren't all clustered like they get when the river is really low so you can find them most anywhere the water looks like it should be holding them.

Out of the 14 years that we have been collecting electrofishing catch-per-unit-effort data I'd rate this year as middle of the road abundance wise; not as scarce as 2005-2007 but not as abundant as 2010-2012. There are also more Hickory Shad in the mix from the Lower Econ on down to Monroe than I have seen in all the 14 years I've been down here.
As an added bonus, the river was up on the flood plain from July through early January which grows a ton of bait; mosquitofish, grass shrimp, baby bream, etc... The super warm weather in November and December kept the pedal to the medal in the bait factory. So now that the river is dropping fast, all that flood plane food is spilling into the river and everything is putting on the feed bag; including the American Shad.

Hope you guys have fun.

Simple Shad Dart

By Craig Crumbliss

Editors Note: In another month, the Shad will be making their way up the St. Johns River. Now is the time to get ready and tie up a mess of flies. So, we turn to the December 2012 issue of the On the Fly newsletter of the Suncoast Fly Fishers for the month's tying feature.

This is my go-to fly for the St Johns River shad run. Creativity is key; use a variety of colors and weights. I'll often have the same pattern with bead chain and dumb-bell eyes. Remember to keep your patterns relatively small; size 6 and 8 are best. I'll also have a few in sizes 4 and 10. Some of my favorite colors to include are: chartreuse, pink, pearl, silver, yellow and red. A variety of patterns will work but most are based around several basic patterns such as the Wooly Bugger, Clouser Minnow, Gotcha and Crazy Charlie.

Materials

Hook:	Mustad 3366 Sizes 4 to 8
Thread:	140 Denier Flat Waxed
Tail:	Pearl Flashabou
Body:	Vinyl Ribbing
Eyes:	Silver Bead Chain
Head:	Antron Dubbing or Uni-Yarn

Tying Instructions

1. Start a layer of thread fro the hook eye to the start of the bend.
2. Tie in your Flashabou tail. Remember to keep it short as the Shat will nip the longer tails.
3. Tie the bead chain or dumb-bell eyes behind the eye of the hook and remember to give yourself some space for the head.
4. Tie in the vinyl ribbing behind the eyes and wind it all the way down the shank to the tail. Mover your thread back towards the eye. Wrap the vinyl rib all the way up to the eyes and tie it off.
5. Tie in a piece of Uni-Yarn to wrap around the eyes to form a dubbed head. You can also use any other type of shaggy dubbing to get the same effect.
6. Whip finish behind the eye of the hook.
